Success means achieving the goal you set for yourself. It can look different for everyone. For example, in a job, success might mean passing a test or getting a promotion. In school, success might mean getting good grades and going to a good college. *Personally, success might mean being able to speak up for yourself.* Success is about doing your best and reaching your own personal goals.

Success is not just about money or fancy things. It's about being happy and feeling fulfilled. It's about finding a balance between work and personal life. Success is also about being valued and appreciated for your hard work. It's about growing and learning new things. And it's about making a positive impact on the world around you.

To be successful, it's important to know what you want and make a plan to achieve it. You can break your goals into smaller steps and give each step a deadline. It's also helpful to have support from your family, friends, peers, and perhaps a network of people who are in the business you desire to be part of doing your work. And when you reach your goal, don't forget to celebrate *and practice gratitude!*

Success is different for everyone. It's about achieving your own goals and being happy with what you have accomplished. So, keep working hard, stay focused, and believe in yourself. You can achieve success in based on your set goal and knowing how. Learn how to achieve success for yourself!
